DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8-10, 14, 15 and 17-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Meginnis (3,864,199). Meginnis discloses a transpiration cooled apparatus comprising: A member for providing a support 14 and a skin 11 surrounding the member including a first side and a second side; wherein the skin is spaced from the member to define a coolant conduit and the skin also defining a pore 20 extending between the first and second sides; wherein coolant used to remove thermal energy from the skin is disposed in the coolant conduit is able to move through the pores. Since the skin covers a turbine blade, it is the position of the Examiner that the skin generally defines a leading edge of the structure. Further, in regards to claim 23 since the apparatus of Meginnis discloses cooling holes (pores), it is the position of the Examiner the selected property step is inherently met since the shapes of the holes are round.

CONCLUSION

Allowable Subject Matter

Claims 1-7 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

While the method of cooling an apparatus, as claimed in claim 1, is generally known the sub steps

recited to form the porous member used in the method were not taught or suggested in any prior art.

Claims 11-13, 16 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gore et al. (5,252,279) disclose a method for making a perforated article.

Koehler (4,562,039) discloses a method of making a porous metal article.
